In Partnership With

SPEAKER Amitabh Khosla, *Chief Revenue Officer*

Amitabh Khosla is the Chief Revenue Officer for the award winning, APM Platform SaaS provider, Shoreline IoT Inc. He has 30+ years of experience in the industrial world of Asset Performance Management and Process Optimization.

Most recently at Honeywell, Amitabh led the Americas sales team, focused on Advanced Software Solutions enabling end-to-end process and production optimization and improved asset management.

With more than three decades of experience in dealing with complex operations and maintenance processes improvement, Amitabh brings insights that help customers and partners deliver impactful improvements in industrial O&M efficiencies.

SEMINAR DESCRIPTION

Remote Monitoring is a key element of predictive maintenance. It is used to collect equipment condition and usage data which combined with your inspection and maintenance information enables a comprehensive view and analysis of equipment condition, maintenance, and operation. By using remote monitoring, you can further optimize maintenance activities, reduce unplanned downtime, and improve equipment safety, productivity and lifecycle value.
